Administrator

Dear Ms. Campbell

## Re: Capital Expenditure Charge Bylaw Updates: 2014 Water System Evaluation Report Update

McElhanney Consulting Services Ltd (McElhaney) was retained by the Qualicum Bay Horne Lake Waterworks District (the District) to review and provide updates to the 2014 Water System Evaluation Report (MCSL, 2014).

The work was carried out in general accordance with our proposal dated February 20, 2018. Written authorization to proceed was provided by the District on March 8, 2018.

In general, the District would like to review the system upgrade projects identified in the 2014 Water System Evaluation Report and confirm adequate funds are being collected for future works identified. Preliminary report findings were presented to Trustees on August 28, 2018. Trustee comments were received and have been incorporated.

This update report should be read in-conjunction with the 2014 Water System Evaluation Report. The following 2014 report sections have been updated and for consistency report number remains the same:

### 3.0 WATER DEMAND

### 3.1 HISTORICAL WATER USE

All three wells are fitted with a meter located in the pump house. Flows are recorded daily and logged by the District XiO Cloud SCADA System since middle April 2015. The data has been downloaded from April 2015 to April 2018.

In addition, monthly flows from 2012 to 2017 were also provided by District staff. Some data gaps were noted, and for the period between April 2015 and April 2018. Refer to Appendix "A" for a summary of SCADA system meter records.

A summary of monthly consumption from 2012 to 2018 is presented in Figure 3.1.

Figure 3.1-2012 to 2018 Water Consumption
Water consumption is lowest from October to April each year, while consumption rates are highest in June, July and August. Summertime water consumption is typically 2 times greater than wintertime consumption. This is consistent with the previous 2014 Report.

### 3.2 EXISTING POPULATION

The serviced population for the District is estimated to be 1,157 persons based on 559 households and an average household population of 2.07 persons (household information provided by the District). Population density is calculated based on statistics from the 2016 Census for both Qualicum Bay and Deep Bay/Bowser as presented in Table 3.1.

| TABLE 3.1: POPULATION \& NUMBER OF DWELLINGS |  |  |  |
| :---: | :---: | :---: | :---: |
| Area | Qualicum Bay | Deep Bay / Bowser | Qualicum Bay <br> Horne Lake <br> District <br> Calculated |
| 2016 Census Data | 2016 Census Data | 1729 | 1,157 |
| Population <br> Total Private <br> Dwellings | 438 | 846 | 559 |
| Population per <br> Dwelling | 209 | 2.04 | 2.07 |

Based on the information above, there is an estimated increase in calculated population of approximately 407 persons from the 2014 Report. This increase is due to growth in both the area and a more accurate count of secondary residents on single metered lots.

### 3.4 SYSTEM LOSSES

System losses were calculated by comparing meter readings at the well head with meter readings at lot services for the period 2009 to 2017. A summary of that comparison is presented in Table 3.2.

| TABLE 3.2: SYSTEM LOSSES |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | Individual Meters <br> $\mathbf{m}^{\mathbf{3}}$ | Well Reading <br> $\mathbf{m}^{\mathbf{3}}$ | Losses <br> $\mathbf{m}^{\mathbf{3}}$ | Percent <br> Loss |  |  |
| 2009 | 151,000 | 171,000 | 20,000 | $12 \%$ |  |  |
| 2010 | 157,000 | 170,000 | 13,000 | $8 \%$ |  |  |
| 2011 | 152,000 | 161,000 | 9,000 | $6 \%$ |  |  |
| Average from 2009 to 2011 |  |  |  |  |  |  |
| 2013 | 163,000 | -- | -- | $\mathbf{8 \%}$ |  |  |
| 2014 | 154,000 | -- | -- | -- |  |  |
| 2015 | 175,000 | -- | -- | -- |  |  |
| 2016 | 140,000 | 188,440 | 48,000 | $26 \%$ |  |  |
| 2017 | 135,000 | 208,685 | 74,000 | $35 \%$ |  |  |
| Average from 2016 to 2017 |  |  |  |  |  | $\mathbf{3 0 . 5 \%}$ |

*Available well reading data were not integral for the whole year in 2013, 2014, 2015.
From the 2014 Report, the average system loss were about $8 \%$ during 2009 to 2011. However, the current data shows an average of $30.5 \%$ over 2016 and 2017. This is an abnormal value.

It is noticed that the average individual metered flow for 2016 and 2017 dropped dramatically by approximately $13 \%$ compared to the average individual metered flow during 2009 to 2014. This suggests some flows in the system were not metered. The individual metered flow data should be review with the District.

### 3.5 SYSTEM DEMAND RATES

Water Demand for the system was calculated using available data from 2005 to 2017. Calculated rates are presented in Table 3.3.

| TABLE 3.3: WATER SYSTEM DEMAND RATES |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
| Demand | Description | Demand <br> Rate <br> L/s | Daily <br> Demand per <br> Capita <br> L/cap/day | Ratio to <br> ADD |
| Average Day <br> Demand <br> ADD | Average rate of consumption in a <br> given year. Based on well meter <br> data from 2005 to 2011 and from <br> 2016 to 2017 | 5.8 | 517 | 1.0 |
| Maximum <br> Day Demand <br> MDD | Consumption for the single highest <br> demand day of the year (July 15, <br> 2015). MDD provides an indicator <br> of the required well supply rate. | 14.9 | 1328 | 2.6 |
| Peak Hour <br> Demand <br> PHD | Consumption for the single highest <br> demand hour per year. PHD is used <br> to identify reservoir requirements. | $* 23.2$ | $* 2069$ | $* 4.0$ |

*Calculated values based on typical ratios to ADD for similar communities.
Table 3.4 provides a comparison of the District's water system demand rates to a range of standards from other municipal water systems on Vancouver Island.

| TABLE 3.4: COMPARISON OF WATER SYSTEM DEMAND RATES |  |  |  |
| :---: | :---: | :---: | :---: |
| Standard | Average Day <br> Demand <br> L/c/day | Max Day Demand | Peak Hour Demand |
| L/c/day | L/c/day |  |  |
| City of Nanaimo | 455 | 1135 | 1820 |
| Capital Regional District | 545 | 1363 | 1908 |
| Master Municipal <br> Construction <br> Documents (MMCD) | 600 | 1200 | 1800 |
| Qualicum Bay Horne <br> Lake District | $\mathbf{5 1 7}$ | 1328 | $\mathbf{2 0 6 9}$ |
| City of Campbell River | 635 | 2100 | 3000 |

Demand rates for the District are in the range of rates for other jurisdictions. In addition, the above tables indicate a decrease in demand when compared to the 2014 Report.

### 3.6 PROJECTED WATER DEMANDS

### 3.6.1 Maximum Future Population

The design population is calculated by multiplying population density (expressed as persons per dwelling unit or ppdu) and the number of services. Future domestic water demand is calculated based on the growth potential for the entire District service area. The population at "Build-out" is estimated based on the maximum allowable subdivision density as listed in the Regional District of Nanaimo's Official Community Plan (Bylaw No. 1335).

There are currently 18 zones within the District and calculation of the Build-out population based on current zoning is presented in Table 3.5.

| TABLE 3.5: MAXIMUM FUTURE POPULATION ESTIMATE |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Description | Zonin g | Area | Min. Lot Size | Max. Residential | Maximum Future Population |
|  |  | Ha | Ha | Dwellings | At 2.07 persons/dwelling |
| Horne Lake Development | CD32Z | 1.1 | - | 19 | 39 |
| Qualicum Bay Seniors | CD41F | 1.9 | - | 25 (assumed) | 52 |
| Crown and Anchor Campground | CD42 | 1.7 | - | 1 | 2 |
| Commercial 1 | CM1B | 0.6 | 0.05 (residential) | 12 | 25 |
| Commercial 2 | CM2M | 0.3 | $\begin{gathered} 0.1 \\ \text { (Office) } \end{gathered}$ | 3 | 6 |
| Commercial 4 | CM4M | 0.5 | 0.2 | 2 | 4 |
| Commercial 5 | CM5Z | 27.5 | $\begin{gathered} 0.16 \\ \text { (Retail) } \end{gathered}$ | 200 (assumed) | 414 |
| Industrial 1 | IN1M | 5.7 | 0.5 | - |  |
| Industrial 2 | IN2D | 2.2 | 0.6 | - |  |
| Public Use 1 | PU1M | 10.6 | 0.1 <br> (Public Utility) | - |  |
| Public Use 6 | PU6Z | 46.1 | - | - |  |
| Recreation 1 | RC1Z | 3.2 | 1 | - |  |
| Resource Management 1 | RM1V | 187.2 | 0.5 <br> (Aquaculture) | - |  |
| Residential 1 | RS1N | 2.7 | 0.16 | 16 | 33 |
| Residential 2 | RS2M | 145.1 | 0.2 | 725 | 1501 |
| Residential 3 | RS3M | 3.5 | 0.2 | 17 | 35 |
| Residential 6 | RS6D | 2.3 | 2 | 1 | 2 |
| Rural 1 | RU1Z | 504.6 | 8 | 63 | 130 |
| TOTAL |  |  |  |  | 2244 persons |

No changes to the Zoning have been noted since the 2014 Report. However, and overall increase in population is noted based on persons per dwelling.

### 3.6.2 Projected Population Growth

Table 3.6 provides a calculation of the recent historical population growth rate for Qualicum Bay and Deep Bay/Bowser based on statistics available from the Census of Canada website (http://www12.statcan.gc.ca).

| TABLE 3.6: HISTORICAL POPULATION \& GROWTH RATES |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Area | Description | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 6}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 6}$ |
|  | Yualicum Bay \& | Population | 1682 | 1882 | 1947 |
| Deep <br> Bay/Bowser | Annual Growth <br> Rate | - | $2.3 \%$ | $0.7 \%$ | $2.2 \%$ |
| Average Annual Growth Rate - 2001 to 2016: |  |  |  |  |  |

Based on the RDN Regional Growth Strategy, historical growth rates and economic conditions, we have assumed the projected population growth rate of $2.0 \%$ per annum. The maximum "build out" population will be reached in approximately 34 years, or in the year 2052. This remains consistent with the 2014 Report.

### 3.6.3 Projected Water Demand

Projected domestic water demand for the next 20 years is presented in Table 3.7 and is based on the current zoning, rates of consumption, peaking factors and projected growth rate.

| TABLE 3.7: PROJECTED POPULATION \& WATER DEMANDS |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Years |  | 0 | 5 | 10 | 15 | 20 |
| Year |  | 2017 | 2022 | 2027 | 2032 | 2037 |
| Population |  | 1157 | 1277 | 1410 | 1557 | 1719 |
| ADD | L/day | 600,000 | 660,000 | 730,000 | 800,000 | 890,000 |
|  | Igal/day | 130,000 | 150,000 | 160,000 | 180,000 | 200,000 |
| MDD | L/day | 1,540,000 | 1,700,000 | 1,870,000 | 2,070,000 | 2,280,000 |
|  | Igal/day | 330,000 | 390,000 | 410,000 | 460,000 | 510,000 |
| PHD | L/day | 2,400,000 | 2,640,000 | 2,920,000 | 3,200,000 | 3,560,000 |
|  | Igal/day | 520,000 | 600,000 | 640,000 | 720,000 | 800,000 |

### 4.0 SYSTEM ANALYSIS

### 4.3 EXISTING DISTRIBUTION SYSTEM

The existing water model was updated to reflect system upgrades completed since 2014. Updated are the following:

- The existing 100 mm and 150 mm diameter AC lines on Leon and Kenmuir Road are replaced with a 250 mm diameter PVC main;
- Activated the twin line from the reservoir to the crossing of Horne Lake Road and railway Right of Way.

No other updates are noted.

### 4.3.2 Current System Performance

After the model was updated, three demand scenarios were run to evaluate the updated system performance. Results were compared to the criteria identified in the 2014 Report.

## Demand Scenario 1 - Current System with Current Peak Hour Flow

The current peak hour flow is $23.2 \mathrm{~L} / \mathrm{s}$ as per Table 3.3.
The results of the existing domestic Peak Hour Demand (PHD) analysis indicate the residual pressures in the system are above the minimum value of $275 \mathrm{kpa}(40 \mathrm{psi})$. There are three areas with pressure less than $400 \mathrm{kPa}(60 \mathrm{psi})$ :

1. Linx Road (west end)
2. Cochrane Road (south end), and
3. Horne Lake Road (south of railway).

Compared to the 2014 Report, the flow in Dunsmuir Road was improved.

## Demand Scenario 2 - Current System with Year 2037 Peak Hour Flow

The projected PHD in Year 2037 (20yrs) is estimated to be $3,560,000 \mathrm{~L} /$ day or $41.2 \mathrm{~L} / \mathrm{s}$, representing a $78 \%$ increase over existing demands. The $20-Y e a r$ PHD analysis provides residual pressures that are similar to current operation. Pressure is maintained above the 275 $\mathrm{kpa}(40 \mathrm{psi})$ minimum. There are five areas with pressure less than $400 \mathrm{kPa}(60 \mathrm{psi})$. Three areas among the five areas are the same areas mentioned in Demand Scenario 1. The other two areas are:

1. Charlton Drive (west end) and
2. Dunsmuir Road (most southerly node).

## Demand Scenario 3 - Current System with Year 2037 Maximum Day Demand and Residential Fire Demand

A fire flow of $60 \mathrm{~L} / \mathrm{s}$ for single family residential development was used. In general, fire flow is not available at $60 \mathrm{~L} / \mathrm{s}$ throughout the District. The available fire flow is less than $30 \mathrm{~L} / \mathrm{s}$ for areas north of Qualicum First Nation.

Compared to the 2014 Report, the improvement is seen in areas on the Island Highway south of Draft Road. Fire flows are now more than $30 \mathrm{~L} / \mathrm{s}$. Previously, available fire flows in these areas were less than $30 \mathrm{~L} / \mathrm{s}$.

### 4.3.3 Modelling Summary

In summary, the existing system can meet Peak Hour Demand with satisfactory pressure under current and Year 2037 conditions. System improvements are required to meet minimum firefighting standards.

### 4.4 PROPOSED DISTRIBUTION SYSTEM IMPROVEMENTS

## Improvement Scenario 1 - Retain Existing Layout and Increase Pipe Sizes

The following system improvements were previously proposed:

- Replace the existing 200 mm diameter line on Horn Lake Road from the rail road track south of Berkshire Road to Huson Road with a 300 mm diameter main. Total length of main replacement is 350 metres;
- Replace the existing 100 mm and 150 mm diameter AC lines on Leon, Kenmuir, Huson and Highway 19A with 250 mm diameter main to create a continuous loop. Total length of main replacement is 850 metres (Leon and Kenmuir has been constructed);
- Replace the existing 150 mm diameter line on Highway 19a from Kenmuir Road south to Van Isle Road with a 200 mm diameter main. Total length of main replacement is 1,100 metres; and,
- Replace the existing 150 mm diameter line on Highway 19A from Huson Road north to Charlton Road with a 250 mm diameter main. Total length of main replacement is 4,200 metres.

After the model was revised as per above improvements, the results indicate that the majority of the system is satisfied for Year 2037 Maximum Day Demand plus a residential Fire Demand of $60 \mathrm{~L} / \mathrm{s}$. For all the hydrants, the available fire flows are more than $45 \mathrm{~L} / \mathrm{s}$ except for the hydrants located along Cochrane Road.

In order to improve the fire flow along Cochrane Road, it is recommended to replace the existing 100 mm diameter line along Cochrane Road and Welch Road with a 150 mm diameter main. Total length of main replacement is 485 metres.

## Improvement Scenario 2 - Construct a Watermain on Bradshaw Road and Increase Pipe Sizes

The following system improvements were previously proposed:

- Install a new 200 mm diameter line on Bradshaw Road from Dunsmuir Road to Highway 19A. Total length of new main construction is 1,700 metres.
- Replace the existing 200 mm diameter line on Horn Lake Road from the rail road track south of Berkshire Road to Huson Road with a 300 mm diameter main. Total length of main replacement is 350 metres;
- Replace the existing 100 mm and 150 mm diameter AC lines on Leon, Kenmuir, Huson and Highway 19A with 200 mm diameter mains to create a continuous loop. Total length of main replacement is 850 metres (Leon and Kenmuir has been constructed);
- Replace the existing 150 mm diameter line on Highway 19A from Huson Road north to Charlton Road with a 200 mm diameter main. Total length of main replacement is 4,200 metres.

After the model was revised as per above improvements, the results indicate that the system in south of Qualicum First Nation is satisfied for Year 2037 Maximum Day Demand plus a residential Fire Demand of $60 \mathrm{~L} / \mathrm{s}$. However, the available fire flows north of Qualicum First Nation ranges from $34 \mathrm{~L} / \mathrm{s}$ to $59 \mathrm{~L} / \mathrm{s}$.

In addition, similar to the results of Improvement Scenario 1, the available fire flows along Cochrane Road are less than $30 \mathrm{~L} / \mathrm{s}$. In order to improve the available fire flows, it is recommended to:

- Replace the existing 150 mm diameter line on Highway 19A from Huson Road north to Charlton Road with a 250 mm diameter main rather than 200 mm main mentioned above. Total length of main replacement is 4,200 metres;
- Replace the existing 100 mm diameter line along Cochrane Road and Welch Road with a 150 mm diameter main. Total length of main replacement is 485 metres.

However, as indicated in the 2014 Report that the north end of the QBHL has a connection to the Bowser Waterworks District via a watermain that crosses the Nile River along Highway 19A.

This connection is provided with a normally closed valve that can be opened to provide flow in either direction in case of emergency.

If this manually operated valve could be replaced with a control valve that would open automatically under low pressure flow conditions, then the diameter of the proposed replaced water line on Highway 19A from Huson Road north to Charlton Road might still be 200 mm .

### 5.0 CONCLUSIONS

A summary of conclusions is presented below:

1. Source water is potable without disinfection but has high manganese content. No change from the 2014 Report.
2. The District should plan for AC watermain replacement and adopt a program that includes the installation of larger replacement mains to improve system capacity. No change from the 2014 Report.
3. Average daily water consumption is 517 litres per capita per day. This represent a decrease from the 2014 Report. This consumption still remains within the range of other similar jurisdictions;
4. Summertime water consumption is approximately 2.0 times greater than wintertime consumption. This remains consistent with the 2014 Report.
5. The system currently serves approximately 1,157 people. That service population is projected to grow to 1,719 by Year 2037. The ultimate build-out population within the District based on the current Official Community Plan is 2244 people.
6. System loss was previously calculated at $8 \%$, which indicated a "tight' distribution system. However, 2016 / 2017 data shows a significant increase. This could be attributed to data collection records.
7. The current well supply has adequate capacity to handle projected growth to Year 2037 for Maximum Daily Demand. This remains consistent with the 2014 Report.
8. The existing reservoirs do not have adequate storage capacity to service the Year 2037 population with fire storage for single family residential development.
9. Additional investigation is required to find the cause of high system head losses in the vicinity of Leon, Marshal and Dunsmuir Roads, and on Highway 19A between Lions Way and Charlton Road. No change from 2014 Report.
10. The existing distribution system can deliver Peak Hour Flows with satisfactory system pressures for both the current population and the projected Year 2037 population. This is consistent with 2014 Reporting.
11. The existing distribution system cannot deliver a fire flow of $60 \mathrm{l} / \mathrm{s}$ plus current Maximum Day Demand throughout the service area. This is consistent with 2014 Reporting.

### 6.0 RECOMMENDATIONS

Based on our review of the updated information provided, computer modelling and discussions with District Staff, we recommend the following system improvements. Each project has been assigned a schedule of priority focused on strengthening the system to improve domestic water supply and improve residential fire flows.

## 1. Project \#1 - Groundwater Study

There is limited information on long term well capacity. Existing available information dates from 1993 to 2006 and is not formalized. As such, it is recommended a Groundwater Hydrologist is retained to undertake pumping tests of all three Wells and determine the safe long term well capacity.

## 2. Project \#2 - Water Treatment Study

Undertake a Water Treatment Study of the water supply sources to determine options for manganese $(\mathrm{Mn})$ removal. Currently levels are not related to health; however, rate payers are experiencing aesthetic issues.
3. Project \#3 - Watermain Investigation

Investigate the following areas to identify the nature of high head losses inferred by hydrant flow test results:
a. Leon, Marshall \& Dunsmuir Roads, and
b. Along the Island Highway, between Lions Way and Charlton Drive.

## 4. Project \#4 - AC Watermain Condition Assessment

In the late 1960's over 7 km of AC watermain was installed. This watermain is approaching approximately 40 years old. All systems deteriorate with age and use, however performance may not be affected until deterioration is well advanced. As such, we recommend the District undertake a condition assessment of the AC pipe to identify areas that need pipe replacement.

## 5. Project \#5 - Horne Lake Road Watermain Upgrade (300mm)

A single 200 mm AC line delivers water to system from the rail road track south of Berkshire Road to Huson Road. To increase hydraulic capacity this 250 m long portion of line needs to be upgraded to 300 mm .

## 6. Project \#6 - AC Watermain Replacement Program

Based on the findings from the AC watermain condition assessment, we recommend the District implement an AC watermain replacement program to address the aging infrastructure. Due to the large amount of old AC pipe in use, planning should be undertaken to replace the critical portions of the main on a yearly basis to avoid a large capital costs.

Replacement in the following areas will also improve residential fire protection:

## Project \#6a - Island Highway Watermain Upgrade (250mm)

This portion of watermain was installed in the late 1960's and is the primary distribution piping to the north end of the District. Replacing the 150mm diameter piping with 250 mm diameter will provide firefighting capacity to the northern end of the District.

## 7. Project \#7 - Bradshaw Road Watermain (200mm)

Construction of the Bradshaw main will improve supply to the south end of the system and increase system redundancy by providing a second feed line to compliment the 150 mm on the Island Highway. A boundary extension has recently been completed in this area which will allow the District to extend service.

## 8. Project \#8 - Manganese and Iron Treatment System

Based on the findings from the Water Treatment Study, Mn treatment may be warranted. There is a wide variety of treatment systems available to water purveyors, as such various costs. However, the existing water supply and storage area can be utilized for the preferred system.

## 9. Project \#9 - Cochrane \& Welch Road Watermain Upgrade (150mm)

A single 100 mm PVC line delivers water to system from to this area. To increase hydraulic capacity for fire protection this 485 m long portion of line needs to be upgraded to 150 mm .

## 10. Project \#10 - Water Storage Reservoir

An additional 87,500 litres of storage will be required to accommodate 2037year MDD and Fire storage requirements.

### 7.0 CAPITAL EXPENDITURE PROGRAM

Table 7.1 provides a summary of the cost estimates with pro-rated allocation between Type A (Serve Existing Customers) and Type B (Serve Future Development).

| TABLE 7.8: COST ESTIMATE APPROPRIATION |  |  |
| :---: | :---: | :---: |
| Project Description | Type "A" Serve Existing Customers | Type "B" Serve Future Development |
| Project \#1 - Groundwater Study | \$ 16,928.00 | \$ 8,228.00 |
| Project \#2 - Water Treatment Study | \$ 17,412.00 | \$ 8,463.00 |
| Project \#3 - Watermain Investigation | \$ 9,056.00 |  |
| Project \#4 - AC Watermain Condition Assessment | \$ 48,516.00 |  |
| Project \#5 - Horne Lake Road Water Upgrade | \$ 172,811.00 | \$ 83,998.00 |
| Project \#6 - AC Watermain Replacement Program | \$ 2,175,053.00 | \$ 1,057,224.00 |
| Project \#6a - Island Highway Watermain Upgrade | \$ 1,821,072.00 | \$ 885,165.00 |
| Project \#7 - Bradshaw Road Watermain | \$ 589,097.00 | \$ 286,341.00 |
| Project \#8 - Manganese and Iron Treatment System | \$ 449,803.00 | \$ 218,635.00 |
| Project \#9 - Cochrane \& Welch Road Watermain Upgrade | \$ 265,434.00 |  |
| Project \#10 - Water Storage Reservoir |  | \$ 284,338.00 |
|  |  |  |
| TOTAL | \$ 5,565.182.00 | \$2,832,392.00 |

Table 7.2 below provides a detailed 5yr Capital Plan breakdown for the initial recommended works.

| TABLE 7.9: 5 YEAR CAPITAL PLAN |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Project | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 0}$ | $\mathbf{2 0 2 1}$ | $\mathbf{2 0 2 2}$ |
| Project \#1 - Groundwater <br> Study | $\$ 25,156.00$ |  |  |  |  |
| Project \#2 - Water Treatment <br> Study |  | $\$ 25,875.00$ |  |  |  |
| Project \#3 - Watermain <br> Investigation |  | $\$ 9,056.00$ |  |  |  |
| Project \#4 - AC Watermain <br> Condition Assessment |  | $\$ 48,516.00$ |  |  |  |
| Project \#5 - Horne Lake <br> Road Watermain Upgrade |  |  | $\$ 256,809.00$ |  |  |
| Project \#6 - AC Watermain <br> Replacement Program |  |  |  | $\$ 150,000.00$ | $\$ 150,000.00$ |
| TOTAL | $\$ 25,156.00$ | $\$ 83,447.00$ | $\$ 256,809.00$ | $\$ 150,000.00$ | $\$ 150,000.00$ |

The 5yr Capital Plan can be revised to suit the availability of funds.

### 7.3 PROPOSED CAPITAL EXPENDITURE CHARGES

Proposed Capital Expenditure Charges (CEC) has been prepared to suit each development type as defined in By-law No. 151 (Amending bylaw 161). Bylaw 161 was passed on January $20^{\text {th }}, 2016$. Bylaw A copy of that bylaw has been included in the Appendix C.

The proposed CEC fees are based on the following assumptions:

- 20 year projection for all projects.

The following population projections have been used:

## 20YR

$\begin{array}{ll}\text { Population } 2017= & 1,157 \text { persons } \\ \text { Population } 2037= & 1,719 \text { persons } \\ \text { Population Increase }= & 562 \text { persons }\end{array}$
Total CEC's $=\$ 2,832,392.00 / 562$ persons $=\mathbf{\$ 5 , 0 4 0} .00$ per person
Please note that existing CEC reserve monies have not been included in the above calculation. The total CEC per person could be reduced if reserve CEC funds are available.

### 8.0 CLOSURE

It has been a pleasure to work with the Qualicum Bay Horne Lake Water District. We trust this document meets your requirements. If you have any further inquiries, please do not hesitate to contact the undersigned at your earliest convenience.

Yours very truly,
McElhanney Consulting Services Ltd.

Chris Pogson, P.Eng
Branch Manager,

## APPENDIX B

## COST ESTIMATES

## CAPITAL EXPENDITURES

PROJECT \# 1-GROUNDWATER STUDY

| ITEM | QTY | UNITS | RATE |  | COST |  |
| :--- | :---: | :---: | :---: | ---: | ---: | ---: |
| Conduct On-Site Pumping Tests | 1 | LS | $\$$ | 8,500 | $\$$ | 8,500 |
| On-Site Monitoring | 1 | LS | $\$$ | 2,500 | $\$$ | 2,500 |
| Reporting | 1 | LS | $\$$ | 6,500 | $\$$ | 6,500 |
|  |  |  | Sub Total | $\$$ | 17,500 |  |
|  |  |  |  |  |  |  |
|  |  |  |  | Contingency | $\$$ | 4,375 |

PROJECT \# 2 - WATER TREATMENT STUDY

| ITEM | QTY | UNITS | RATE |  | COST |  |
| :--- | :---: | :---: | :---: | :---: | :---: | ---: |
| Review Existing Information | 1 | LS | $\$$ | 2,500 | $\$$ | 2,500 |
| Review Treatment Options | 1 | LS | $\$$ | 5,500 | $\$$ | 5,500 |
| Prepare Construction Cost Estimate | 1 | LS | $\$$ | 2,500 | $\$$ | 2,500 |
| Reporting | 1 | LS | $\$$ | 7,500 | $\$$ | 7,500 |
|  |  |  | Sub Total | $\$$ | 18,000 |  |

| $25 \%$ Contingency | $\$$ | 4,500 |
| :---: | :---: | ---: |
| TOTAL | $\$$ | $\mathbf{2 2 , 5 0 0}$ |

| $15 \%$ Engineering | $\$$ | 3,375 |
| :---: | :---: | ---: |
| TOTAL | $\$$ | $\mathbf{2 5 , 8 7 5}$ |

PROJECT \# 3 - WATERMAIN INVESTIGATION

| ITEM | QTY | UNITS | RATE | COST |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Conduct Hydrant \& Pressure Tests | 1 | LS | \$ 2,500 | \$ | 2,500 |
| Monitor Reservoir \& Water Meter | 1 | LS | \$ 800 | \$ | 800 |
| Analyze in Water Model | 1 | LS | \$ 1,500 | \$ | 1,500 |
| Reporting | 1 | LS | \$ 1,500 | \$ | 1,500 |
|  |  |  | Sub Total | \$ | 6,300 |
|  |  | 25\% | Contingency | \$ | 1,575 |
|  |  |  | TOTAL | \$ | 7,875 |
|  |  | 15\% | Engineering | \$ | 1,181 |
|  |  |  | TOTAL | \$ | 9,056 |

PROJECT \# 4-AC WATERMAIN CONDITION ASSESSMENT

| ITEM | QTY | UNITS | RATE | COST |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Collect Sample throughtout system | 15 | ea | \$ 800 | \$ | 12,000 |
| Laboratory Testing | 15 | ea | \$ 750 | \$ | 11,250 |
| Reporting | 1 | LS | \$ 10,500 | \$ | 10,500 |
|  |  |  | Sub Total | \$ | 33,750 |
|  |  | 25\% | Contingency | \$ | 8,438 |

## APPENDIX C

## BYLAW 151

## QUALICUM BAY - HORNE LAKE WATERWORKS DISTRICT BYLAW NO. 161

A bylaw to amend Bylaw No 151, being the Capital Expenditure Charge Bylaw (CEC Bylaw).
The Trustees of Qualicum Bay - Horne Lake Waterworks District ENACT AS FOLLOWS;

1. That the improvement district's Bylaw No 151, Capital Expenditure Charge Bylaw, passed by the Trustees on the $20^{\text {th }}$ day of January, 2016 and registered by the Inspector of Municipalities on the $22^{\text {nd }}$ day of February 2016, is hereby amended by replacing Schedule A as attached:
2. This bylaw may be cited as the Bylaw \#161 Capital Expenditure Charge Amending Bylaw.

INTRODUCED and given a first reading by the Trustees on the $18^{\text {h }}$ day of January 2017.
RECONSIDERED and finally passed by the Trustees on the $15^{\text {th }}$ day of March 2017.

I hereby certify that this is a true copy of Bylaw No. 161

## SCHEDULE "A"

BYLAW NO. 151
Amending Bylaw 161

## CAPITAL EXPENDITURE CHARGES (WATER FACILITIES)

Land Use
Basis of Assessment
Charge

## A. Residential

1) Single-family $\quad$ Per Lot being created $\quad \$ 3,338.00$
2) Multi-family

Per unit to be constructed
\$ 3,338.00
3) Bare-Land Strata Development Per dwelling unit
\$ 3,338.00
4) Trailer Per pad or space built or provided for \$ 2,503.00
B. Commercial

Per square meter of floor space created \$20.00

Minimum Charge of \$ 3,338.00
C. Institutional

Per square meter of floor space created $\$ 20.00$
Minimum Charge of \$ 3,338.00
D. Industrial

Per square meter of floor space created \$20.00

Minimum charge of $\$ 3,338.00$
